SESSÃO DE TEMAS LIVRES EM ANGIOLOGIA

ISQUEMIA CEREBRAL DE ORIGEM EXTRACRANIANA

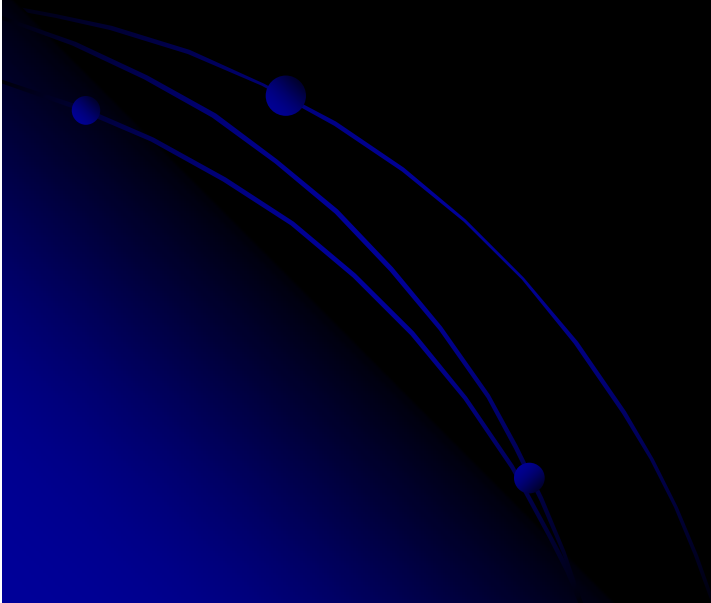

ANATOMIA

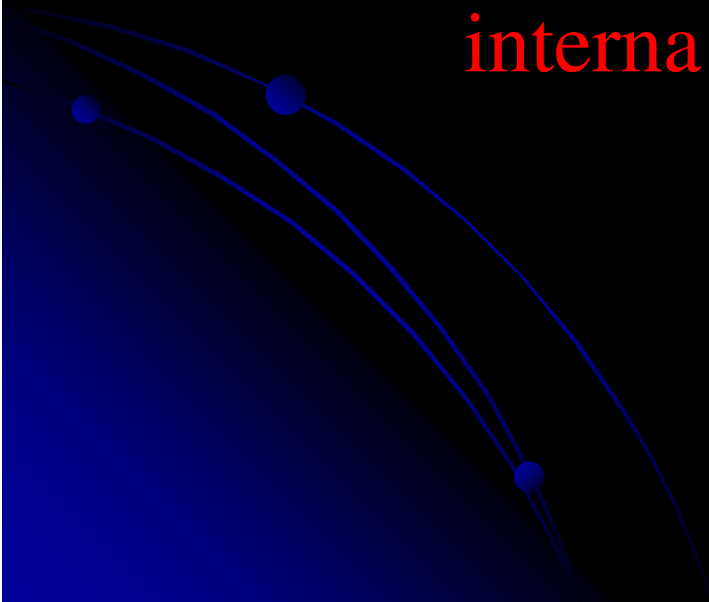

HISTÓRICO

- Wepfer (1958)
- Moniz (1927)
- DeBakey(1953)

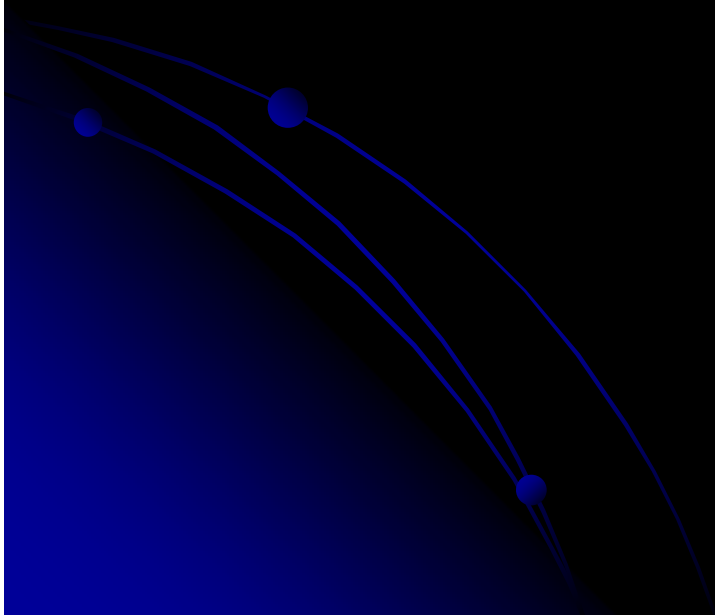

ETIOPATOGENIA

- Aterosclerose
- Arterite de Takaiasu
- Embolia cerebral
- Displasia fibromuscular
- Acotovelamento da carótida interna

QUADRO CLÍNICO

- AIT
- AVC
- Assintomático

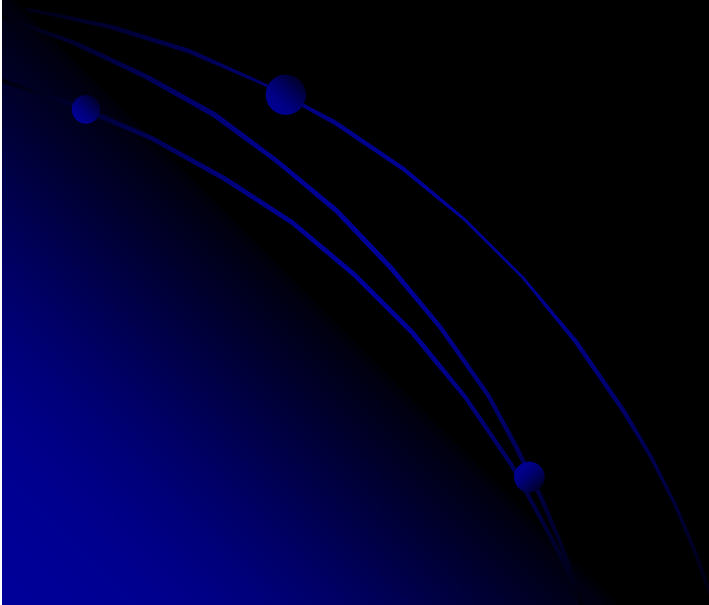

DIAGNÓSTICO

ARTERIOGRAFIA

- Quando indicar?

TRATAMIENTO

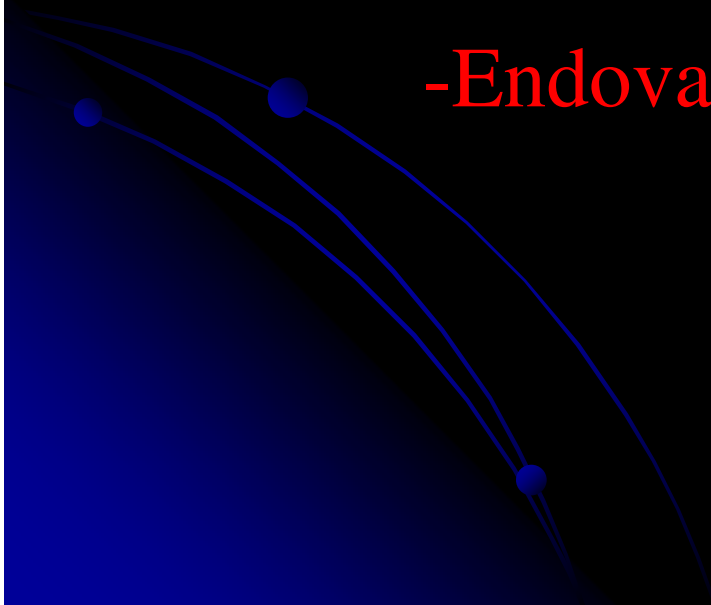

-Clínico

(CAPRIE-1996)

-Cirúrgico

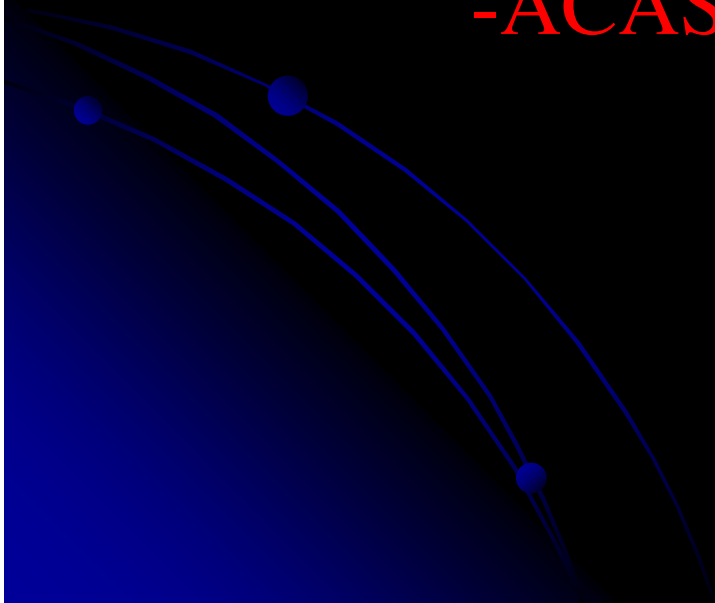

-Endovascular

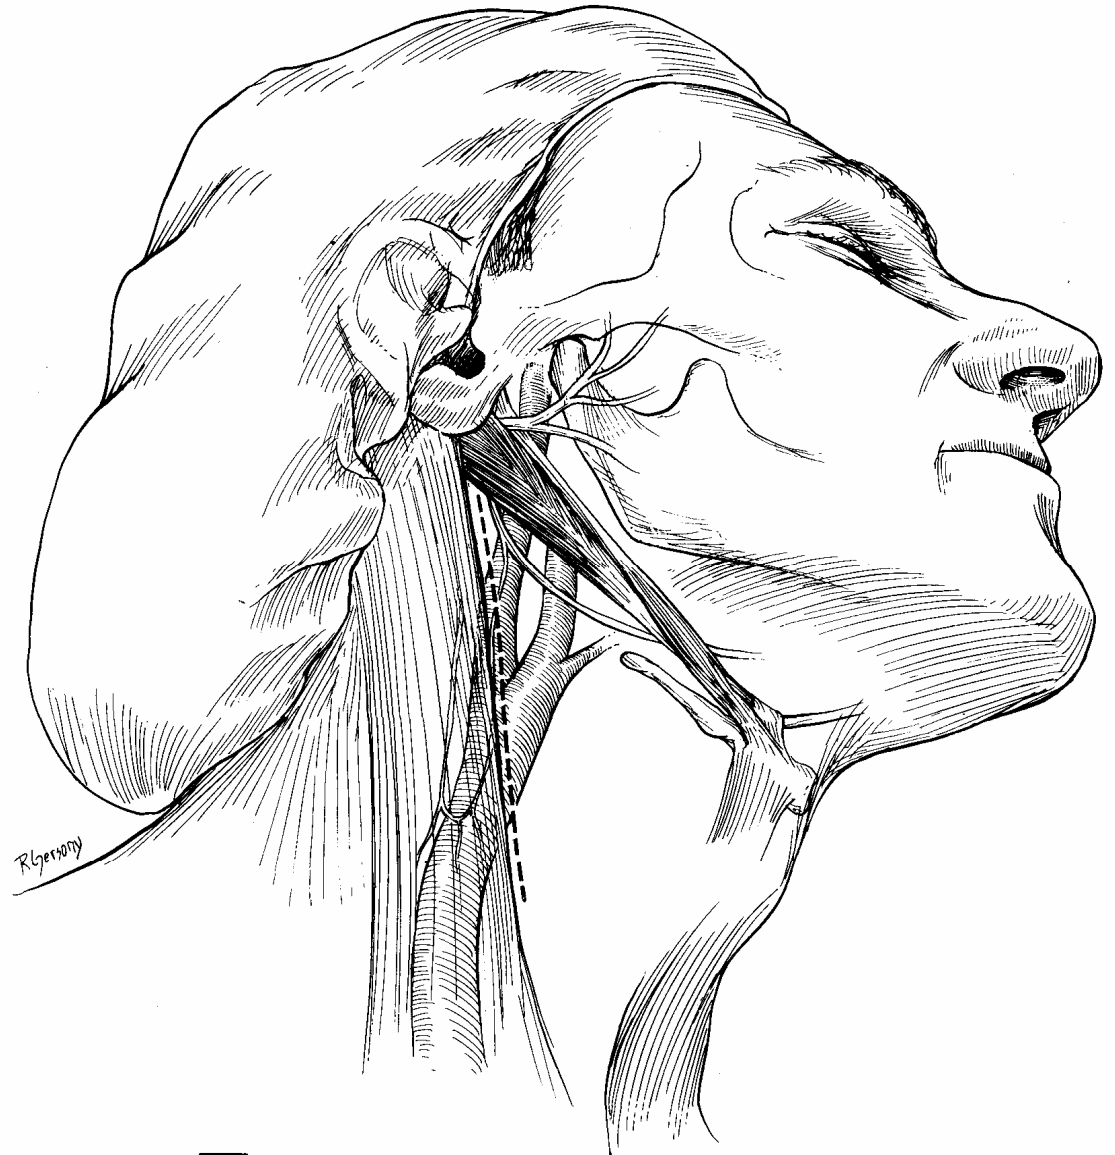

TRATAMENTO CIRÚRGICO

Indicações

- NASCET
- Ensaio clinico europeu
- ACAS

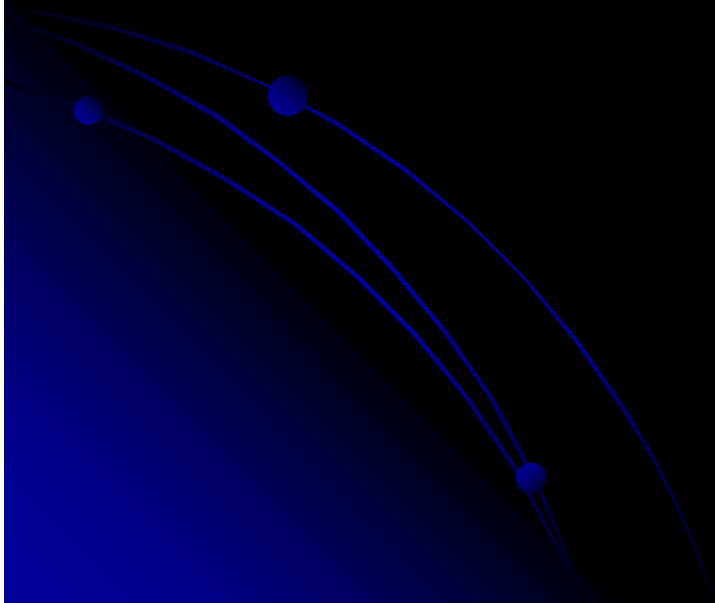

TRATAMIENTO CIRÚRGICO

TRATAMENTO CIRÚRGICO

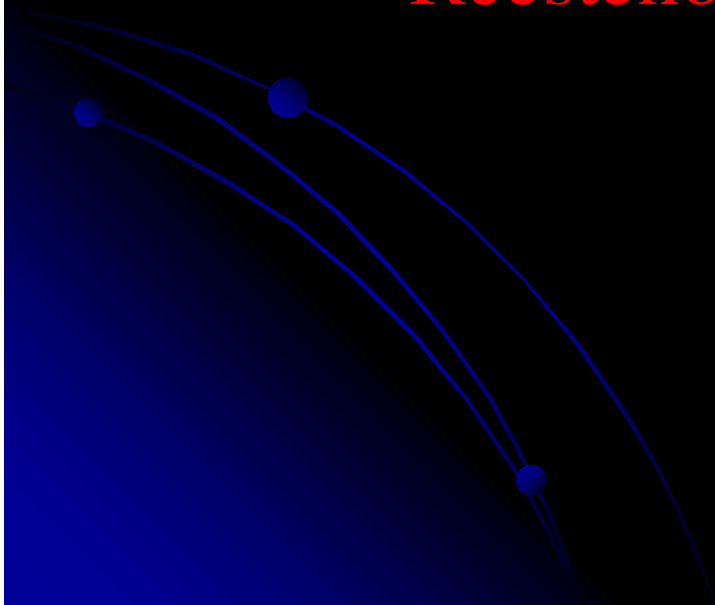

Considerações técnicas

- Sutura primaria x remendo
- Utilização de shunt

COMPLICAÇÕES

- Lesões neurológicas
- Óbito(0,6-1,9%)
- AVC
- Reestenose

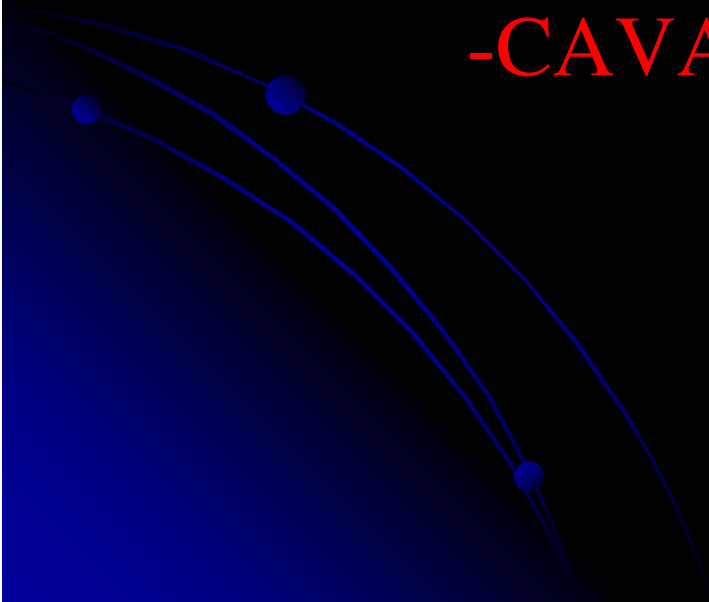

ENDARTERECTOMIA

X

ANGIOPLASTIA

-CREST(1997)

-CAVATAS(1998)
